TRANSITION 2 (3x1)

The REFLECTION of the Photo Series:
Photo Series: Transition 2 (3x1) 1, 2, 3 - For more infos/pic see: Photo Series: Transition 2 (3x1) 1, 2, 3

This exhibition of the Series is incomplete and that (surprise) the Series is not finished yet. The short stories introduced by the Series are (Prologue) extra taken.

Should seasonal transitions are NOT to human expect?

To be viewed on a screen: (1000 pixels or more) in width

Above representation diagrams: The transition from the reflection of the light on the natural (seasonal) living the nature. This is an exceptional example of nature's cycle (seasonal). This transition is highly precise and aims at keeping the cerebral activities low or normal in the transition phase. Human cerebral activities are (mostly) not needed in this phase. The levels of the cerebral energy = 2.5%-5.0%(+0.5%).
Human cerebral activities are (mostly) not needed in the transition time and the cycle of the seasons. In general, any major change of color that affects the static or quasi static forms in the natural world is a seasonal transition.
